

REDEFINING SECURITY SCREENING WITH ADVANCED INTEGRATION

Unifying LINEV Systems baggage scanners and Garrett WTMD for seamless real-time threat detection

KEY FEATURES

- Comprehensive Screening Awareness
- Operational Convenience
- Faster Response Times
- Enhanced Workflow Efficiency
- Improved Operator Usability
- Scalable Integration

LINEV Systems introduces a groundbreaking solution that integrates its advanced baggage scanners with Garrett Walk-Through Metal Detectors (WTMD).

This innovative system consolidates screening data onto a single interface, allowing operators to view real-time WTMD detection zones directly on the baggage scanner monitor. This integration dramatically enhances operational efficiency by streamlining workflows, reducing operator workload, and improving response times.

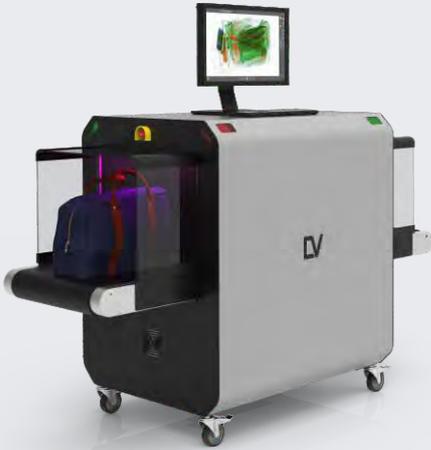

Whether upgrading existing equipment or deploying a comprehensive new system, LINEV Systems delivers unparalleled precision, usability, and reliability for modern security challenges.

REDEFINING SECURITY SCREENING WITH ADVANCED INTEGRATION

BV 6045

BV 6045 is a high-resolution, single view X-ray baggage inspection system with the ability to automatically detect prohibited objects and threats.

The tunnel with a width of 610 mm and a height of 450 mm is optimal for inspection of baggage, bags, hand luggage and parcels. The system may be used at inspection points of critical infrastructure facilities, law enforcement and security agencies, customs, border guards, hotels, event centers, educational institutions,

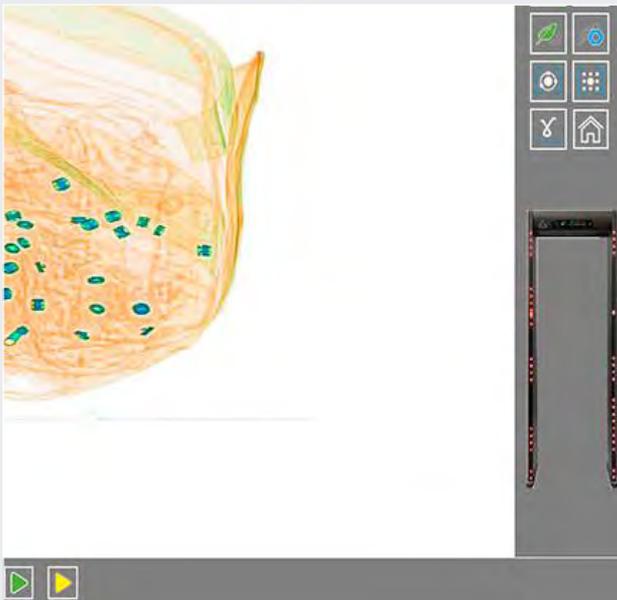

Paragon™ Metal Detector

Provided by LINEV Systems UK, the Garrett Paragon metal detector sets a new standard in security screening with its cutting-edge technology and intuitive design. Its innovative Ambiscan feature allows dual sensitivity settings, enabling the detection of incoming threats and outgoing items simultaneously. With 66 high-resolution detection zones, Paragon offers precise identification, reducing delays and enhancing efficiency.

CUSTOMER BENEFITS

Comprehensive Screening Awareness: Integration enables operators to monitor baggage scans alongside real-time WTMD signals, improving overall situational awareness without blending threat categories.

Operational Convenience: Displaying WTMD detection zones on the baggage scanner interface centralizes data, reducing the need for operators to switch focus between multiple devices.

Faster Response Times: The integrated interface allows operators to quickly assess alerts from both systems, streamlining decision-making and improving checkpoint throughput.

Enhanced Workflow Efficiency: Real-time coordination between WTMD and baggage scanner systems minimizes manual cross-checking, enabling smoother and faster operations.

Improved Operator Usability: Unified visual feedback supports easier interpretation of alerts, reducing fatigue and improving accuracy during prolonged shifts.

Scalable Integration: Suitable for upgrading existing systems or implementing new setups, the integration enhances flexibility and ensures optimal security performance.

Flexible Finance Options Available - LINEV Systems UK has partnered with a finance company to offer tailored finance options to help businesses spread the cost of investments to improve cash flow, with potential tax benefits & no major upfront costs. Please contact us for more information
